Dear Ms. Peterson:

I am pleased to write a letter to confirm that the University College of the North supports the "Operation Water Biology" project. This project and the overall work of the Safe Drinking Water Foundation is of vital importance in reminding us how essential water resources are to our communities and reminds us how fortunate we are to have access to safe drinking water.

"Operation Water Biology" will instill in students at a very young age the importance of science as it relates to safe drinking water by providing hands-on experiences related to biology. The chemistry of the water treatment process will be of interest to children, who are intrigued by transformation. The expertise that members of the Safe Drinking Water Foundation bring to enhance the learning experience will be appreciated by teachers and educational administrators.

The University College of the North supports and advocates for this project. Should you have questions, please contact me.

Warmest regards,

Denise K. Henning, Ph.D.  
President and Vice Chancellor  
University College of the North
