

Greetings from the Safe Drinking Water Foundation,

Do you believe that ALL Canadians have access to truly safe drinking water? That is water which meets or exceeds the most stringent of all International water quality standards – not just Canadian *guidelines*?

Don't you think ALL Canadians are entitled to truly safe drinking water? SDWF scientists estimate that over 90% of First Nation communities and a similar % of rural communities not only do not have access to safe drinking water, they do not have the ability to produce it with present water treatment systems. It is not good enough to measure just five of the 56 parameters in the Canadian *guidelines* – all 56 parameters need to be taken into consideration!

Do you fully understand the difference between *guidelines* and REGULATIONS? You are invited to visit:

<http://www.safewater.org/PDFS/PurposeofDrinkingWaterQualityGuidelinesRegulations.pdf> to learn why we need NATIONAL REGULATIONS for water quality here in Canada. Please let us know how we can help you to further this goal.
