

How Can You Help?

You are the Executive Director of a charity that focuses on drinking water quality issues in Canada. A resident of Ontario has emailed you to ask you to help ensure that all Ontario residents have clean water. She informs you that there are very serious issues in Chatham-Kent-Dover townships and that some of the residents have to travel 8 km round trip at their own expense for water and others have permanent polypropylene tanks in their garages and have water delivered. She says that the water turned brown after industrial wind turbines were constructed.
